Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 30-32 are rejected under 35 U.S.C. 103(a) as being unpatentable over de Medinaceli '561.

De Medinaceli shows all of the claimed features except for applying a non-pulsatile electrical field.

Borgens et al teaches applying a non-pulsatile electrical field for repairing or growing a nerve. See Fig. 1.

One of ordinary skill in the art would have found it obvious to apply the teaching of directional nerve regeneration to the device of de Medinaceli because the electrical field generation disclosed in Borgens et al provides a train of positive and negative current stimulation fields which provide for an equivalent nerve regeneration for the

"electrical pulses" suggested to be used in the de Medinaceli device. De Medinaceli teaches maintaining electrical conductivity in the nerve with chambers 22 and 23 being maintained in contacting juxtaposition throughout a period of about 5 hours. See col. 10, lines 10-20.

One of ordinary skill in the art would have found it obvious to provide the electrical field for a sufficient length of time after effecting nerve repair because de Medinaceli teaches upon removing the chambers the nerve is subject to breakage and providing additional time after effecting nerve repair will further assure structural integrity to the nerve.

Allowable Subject Matter

Claims 1-29 are allowed.
